KEYWORDS

Thus, the following are discussed in the article: the essence of the agrifood sector, information about global agrifood networks, work done within the European Research Area vision 2020, Hierarchy of Decision-Making for AFSCs, etc.

ABSTRACT

Reducing food waste is an important part of sustainable sourcing and production. This includes implementing practices to reduce waste at every stage of the food supply chain, from farm to table. Efficient and transparent supply chain management is important to creating a sustainable food system.

To the article "Sustainable agrifood supply chain management" REVIEW

Reducing food waste is an important part of sustainable sourcing and production. This includes implementing practices to reduce waste at every stage of the food supply chain, from farm to table. Efficient and transparent supply chain management is important to creating a sustainable food system. The agri-food chain encompasses the individuals and/or businesses involved in the agricultural production and processing of food, encompassing production, processing, storage, trading, distribution and consumption. A sustainable supply chain is one that uses environmentally and socially sustainable practices at every stage to protect the people and environments across the whole chain. This means an organisation upholds environmental and social standards for their own operations and their suppliers' operations.

Thus, the following are discussed in the article: the essence of the agrifood sector, information about global agrifood networks, work done within the European Research Area vision 2020, Hierarchy of Decision-Making for AFSCs, etc.
