Abstract: This article highlights the important role of foreign languages in the field of medicine. Learning a foreign language in medicine plays the most important role for the development of this field and joining the ranks of countries with developed medical fields.

Keywords: foreign languages, medicine, medicine of developed countries, language certificate

Introduction: Currently, sufficient attention is paid to the field of medicine in our country. Those who ensure the stability and peaceful development of our country are currently the majority of young personnel. Their healthy development is the responsibility of competent medical staff. Therefore, medical personnel should be regularly searched. Every organism is structured in the same way, whether it is an American citizen or an African citizen. Based on this, the medicine of another country can be applied in Uzbekistan. No matter what country it is, the medical sector of the country is a factor that shows how developed it is. Currently, foreign investments are being implemented in our country for the development of medicine. In this process, language is the tool that ensures communication between two countries.

Main Part

Currently, English is taught as a foreign language in the educational system in all countries, as well as in our country, since English is the language that connects all countries. Medical personnel use various medical technologies during their work. Almost all technical languages require knowledge of English from the administrator. We can go to foreign countries to improve our medical skills not in our language, on the contrary, it is carried out in the widely used language - English. [2] During the years of independence, Uzbekistan remained a country with a low level of English proficiency. That is why new projects and reforms are being implemented in the country. Having achieved results in this field, Uzbekistan will finally be able to move to a new stage of development.

In Uzbekistan, the methodology of teaching English is competency-based on the approach, the formation of linguistic competences during the lesson is expected to lead to the development of speech competences. Based on international experiences, through specific requirements for language learning (listening - listening), (speaking), (reading) and (writing) skills are formed. It is desirable to use this approach a little more creatively in teaching English. [3] By now, students of medical institutions have introduced language certifications for the next stage of the master's course after completing the bachelor's degree. [4] From the next academic year, students will have an international certificate of proficiency in a foreign language (English, German, French). An additional allowance is paid to the scholarship of students of medical institutions of higher education. This Uzbekistan of the president "Training of personnel in the medical and sanitary field and reflected in the decision on measures to introduce a completely new system of continuous professional development. in order to radically increase, to attract qualified teachers to the field, to increase the interest of the population in learning foreign languages, to popularize the study of foreign languages among the population and to master them completely creation of necessary conditions, coordination of introduction of internationally recognized programs and textbooks on

teaching foreign languages at all stages of education, development of modern teaching. skills among teachers; in order to introduce a chain of continuous education in the field of teaching foreign languages according to the principle of "kindergarten-school-higher education organization-enterprise" coordinating the development of methods and recommendations for language learning suitable for all segments of the population; It can be seen from this that we need to make proper use of the reforms initiated by the leader of our country. All these reforms are aimed at making the young generation a potential doctor for the development of our country.

In our country, a modern system has been created for the training of secondary medical workers and the organization of nursing work in medical institutions according to international standards. It was created on the basis of the decision of the President of the Republic of Uzbekistan dated 19.05.2021 No. Reforming and updating the educational system, applying modern methods of teaching, updating the educational process, using modern educational tools means to start using it. The role of the foreign language of medical education, i.e. English, and the importance of the language in increasing the development of this country and in the development of medicine. Sufficient attention is paid to the field of medicine in our country. Medical professionals with mature competence are important in bringing up a healthy and mature generation plays a role. The medical facility established by the initiative of the President the number of institutions is increasing day by day. Mutual relations with developed countries are getting stronger. Including cooperation agreements with developed countries in the "Republic Center for the Improvement of Qualifications and Specialization of Medical and Pharmaceutical Workers of the Republic" is being built. For example: Turkey, Germany, Japan, Korea, India, Russia, Kyrgyzstan, China are among them. Currently, foreign investment for the development of medicine widely used in our country. Of course, language is very important for medical personnel to know foreign languages and be able to use them where necessary. In medicine, it is necessary to know the English language in the management of all techniques, technology, and equipment. Of course, we cannot put all medical terms in English in this article. We always recommend using authentic guides to get the most up-to-date information. General terminology for everyone, medical terminology, professional English in medicine, nurses we recommend using English language textbooks for the pharmaceutical industry. English is very important for every field, it is also important for learning and applying it in life. In the independent Republic of Uzbekistan, the attitude towards foreign languages, especially English, has changed radically. Since there is an opportunity to study and improve skills in foreign countries, our young people should have the opportunity to work in foreign languages at the same level as they conduct their future activities in their native languages.

In conclusion, the significance of foreign languages in medicine cannot be overstated. From facilitating communication with patients of diverse linguistic backgrounds to enabling collaboration and research on a global scale, foreign languages serve as indispensable tools for healthcare professionals. By embracing linguistic diversity and proficiency in foreign languages, medical practitioners can enhance patient care, promote cultural competence, and contribute to advancements in healthcare worldwide. As we continue to navigate an increasingly interconnected world, recognizing and valuing the vital role of foreign languages in medicine is essential for delivering equitable and effective healthcare to all individuals, regardless of language barriers.
